

LOOMSTEROLOGY

A loomster is that one mutant french fry that's freakishly long in comparison to all the other fries in a box or bag.*

* urbandictionary.com

1. To qualify for loomsterhood, the longest fry in a group must be how much longer than the second longest fry if this one is not itself a loomster?
2. If the second longest fry is also a loomster, what is the threshold for judging the larger loomster as one for the ages?
3. Should it be eaten first or last? In what general contexts? In what specific contexts?
4. Should it be eaten in special way? Should a ritual be associated with its consumption?
5. Should it be eaten at all? This is, of course, the big question.
6. If not, how best to preserve it. Where and how to display it? To whom? Security?

Remember, an important purpose of education is to help learners ask the really important questions, and these need to be asked with the most precision.
