

Strong AI

SPECULATIONS, QUESTIONS

The only way humans can control artificial intelligence is to know at least one thing an intelligent machine could never know; only then can a "kill switch" be created.

In the absence of such a switch, humans need to make sure that AI development does not reach the point of no return. If it does, there will be no need to worry about the "great heat death of the universe" because, long before this, human freedom and meaningful life will be no more. *How can we ever know what an artificial intelligence could never know?*
