

IT'S ABOUT TIME

WHAT SCIENTISTS BELIEVE

- Time started when the big bang occurred.
- Communication between entangled particles is instantaneous.

SOME QUESTIONS

- Does time imply motion?
- Was there motion before the big bang?
- Was Einstein wrong about simultaneity?
- Does time physically exist?
- What does time weigh?
- Does time occupy space, or is space-time a complete integration of the physical and non-physical?
- Is the domain of science everything, including the non-physical?
- Is time physical, non-physical, or spirit?
